### **DETAILED ACTION**

1. Applicant's April 25, 2006 Appeal Brief is convincing with regards to overcoming the previous rejection. The examiner regrets the lack of compact prosecution. However, the following is deemed warranted and prosecution is hereby reopened.

#### ***Claim Rejections - 35 USC § 103***

2. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosenberg et al., US 6,418,416 in view of Call, 6,154,738.

Rosenberg discloses, e.g. Figs. 1-4, an electronic inventory control restocking, e.g. 268, an inventory allocation, e.g. cols. 4-6, e.g. 110, 125, 15, that is automatically replenished e.g. Fig. 2, through the completion of transactions, e.g. Internet 145, supplier interface, e.g. 165, when inventory is reduced below a pre-set level, e.g. cols. 11-12, lines 63-2, and a dynamic calculation, e.g. server 130. The memory is inherent in Rosenberg. It is noted that the inventory allocation may be received from a remote site over the distributed network, e.g. Internet. Rosenberg does not disclose on-line sales.

Call discloses, e.g. Fig. 6, an inventory control system, e.g. 420, an online sales website, a server, e.g. 430, and a purchasing module, e.g. 501, for automatically tracking inventory.

To have provided Rosenberg an inventory control system, e.g. 420, an online sales website, a server, e.g. 430, and a purchasing module, e.g. 501 for automatically tracking inventory would have been obvious to one of ordinary skill in the art. Likewise, to have provided the common knowledge aspects of the remaining claims would have been obvious when viewing Rosenberg, in view of Call. The motivation for having done such would have been to incorporate common knowledge online sales techniques using the Internet.
